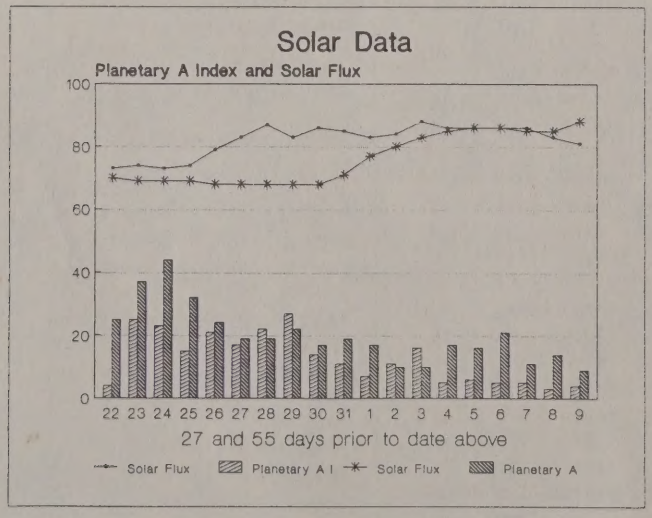
Propagation Watch

The bands picked up considerably in mid-July. A small increase in solar flux was enough to provide a few, weak openings on 15 meters. A quiet geomagnetic field meant that polar paths opened after a long dry spell, permitting some deep Asian contacts.

Continuation of these factors plus seasonal improvements, should provide DXers with reasonable band conditions during the next month. There is an increased chance of below-normal conditions for the next few days, due to a very persistent coronal hole, but otherwise expect above-average summertime conditions.

20 meters remains the primary DX band, with 30 and 40 meters productive late in the evenings, and 17 meters open, but not very active, during daylight hours. Any slight increase in solar flux will probably push the maximum useable frequency (MUF) above 21 MHz; keep an ear on 15 meters if that happens. Seasonally high noise levels make low-band DXing difficult, but dedicated low-band enthusiasts can pull out some good ones, such as **TNØCW**. Watch for north-south openings on the higher bands.



Mexican DXer Nominated for Nobel Peace Prize

Popular Mexican amateur Bishop Samuel Ruiz XE3AXS has been honored with a nomination to receive the Nobel peace prize. Ruiz, age 69, serves as Bishop of San Cristobal (Chiapas). Born in Irapuato, Guanajuato, Ruiz has labored diligently among Mexico's indians of the Chiapas region. The Nobel nomination recognizes Ruiz's peace initiatives and efforts to settle recent disputes between the Chiapas indians and the Mexican government. The final announcement of Nobel recipients is expected to come in early October. Ruiz is well known among American DXers and is highly revered by all of Mexico's hams.
